## About

B.Tech Computer Science and Engineering student interested in web development and software development. Familiar with Java, Python, SQL and front-end technologies. Building technical skills through academic and personal projects. Seeking a technical internship to apply existing knowledge, learn from real-world development, and contribute to a collaborative team.

## Education

**B.Tech – Computer Science and Engineering** **2025 – 2029**
Uka Tarsadia University (AMTICS), Gujarat | 3rd semester

**12th / Higher Secondary (GSEB)** **2025**
Deep Darshan Vidhya Sankul

**10th / Secondary (GSEB)** **2023**
Deep Darshan Vidhya Sankul

## Technical Skills

**Programming Languages:** Java, Python, JavaScript, SQL
**Web Technologies:** HTML5, CSS3, React.js
**Database:** SQL
**Development Tools:** Git, GitHub, VS Code, XAMPP

## Projects

**Shop Management System** **GitHub: Patil-Jayesh-21**
*HTML, CSS, JavaScript*

- Designed a web-based system to manage a shop's daily work: product records, stock levels, customer details and sales entries in one place.
- Built the complete interface and application logic using only HTML, CSS and JavaScript, covering data entry forms, input validation and record display in the browser.
- Aims to replace paper ledgers with a digital record, reducing manual entry mistakes and making stock and sales easier to track.

**Electronic Shop Management System** **GitHub: Patil-Jayesh-21**
*PHP, SQLite, XAMPP*

- Developed a system for an electronics shop to organise inventory of items such as mobiles and accessories, customer records and billing.
- Built the back-end logic in PHP with a lightweight SQLite database, running locally on XAMPP; included stock management to keep track of available items and printable sales receipts for each purchase.
- Aims to speed up billing and checkout for shop owners and cut the errors that come with handwritten records.

## Certifications & Workshops

- Getting Started with Linux Fundamentals (RH104) – Red Hat Training (Credly badge)
- GitHub Workshop
